Project Design Phase

Solution Architecture

Date	22 October 2026
Team ID	SWUID2026403471
Project Name	IMovies – Movie Booking Website
Maximum Marks	4 Marks

Solution Architecture:

The solution architecture for IMovies provides a user-friendly online platform for customers to explore movies and book theatre tickets. The website brings movie information, theatre and show details, seat selection, and booking information into one convenient place. Its high-level design separates the web interface, application logic, core booking modules, and database so that the main functions can be managed clearly.

- Browse movies and view posters, descriptions, and other available movie information
- Search and filter movies to help customers find suitable options
- Display theatre details, show dates, show timings, and seat availability
- Support user registration and login, if included in the implementation
- Allow customers to select seats and create ticket bookings
- Store and retrieve relevant movie, show, seat, user, and booking records
- Display a booking summary and confirmation after a successful booking
- Provide management functions for maintaining movie and show information, if included
